M3.3 Artifact Publishing

✓ PASS – CI pipeline configured to push Docker image to GHCR on main branch push

The CI workflow builds the Docker image and pushes to GitHub Container Registry (ghcr.io) on every push to the main branch (see ci-cd.yml → build-image job).

M4 – CD Pipeline & Deployment

M4.1 Deployment Target (Kubernetes + Docker Compose)

✓ PASS – Kubernetes Deployment + Service YAML
✓ PASS – Docker Compose manifest

docker-compose.yml:

```
version: '3.8' services: inference-api: build: context: . dockerfile: Dockerfile
container_name: cats-dogs-api ports: - "8000:8000" environment: - PYTHONUNBUFFERED=1 -

M4.2 CD / GitOps Flow

✓ PASS – CD flow defined in GitHub Actions ci-cd.yml (smoke-tests job on main)

The CI/CD workflow has three sequential jobs: test → build-image → smoke-tests. The smoke-tests job runs only on pushes to main, pulling the freshly built image and running the health/prediction checks.

M4.3 Smoke Tests / Health Checks

✓ PASS – Smoke test script present (deploy/smoke_tests.py)
✓ PASS – Smoke tests pass against running API (exit code 0)

```
INFO:__main__:Starting smoke tests... INFO:__main__:Target: http://localhost:8000
INFO:__main__:✓ Health endpoint test passed INFO:__main__:✓ Info endpoint test passed: Cats vs
Dogs Classification API v1.0.0 INFO:__main__:✓ Metrics endpoint test passed: Requests: 3,

tests passed
```

M5 – Monitoring, Logs & Final Submission

M5.1 Basic Monitoring & Logging

✓ PASS – Prometheus configuration (monitoring/prometheus.yml)
✓ PASS – GET /metrics endpoint (request count tracking)

```
GET /metrics → { "total_requests": 3, "total_predictions": 2 }
```

```
global: scrape_interval: 15s evaluation_interval: 15s scrape_configs: - job_name:
'cats-dogs-api' static_configs: - targets: ['localhost:8000'] metrics_path: '/metrics'
scrape_interval: 10s
```

Prometheus service is configured in docker-compose.yml to scrape the API /metrics endpoint every 10 seconds. The API logs every request and response (class, confidence, request #).

M5.2 Model Performance Tracking (Post-Deployment)

✓ PASS – Test-set metrics persisted to models/artifacts/metrics.json
✓ PASS – MLflow experiment tracking active

```
{ "test_accuracy": 0.555, "precision": 0.5764844945070227, "recall": 0.555, "f1":
0.5213895835013846 }
```
